

# Tomas Maxim

Student

 **Contact**

 [intch.org/p/15501843](https://intch.org/p/15501843)

I am a passionate developer with experience in full-stack web development and Python programming. I specialize in both frontend and backend development, utilizing the React framework for dynamic and responsive user interfaces, and Python for data analysis and backend functionality. I have completed a comprehensive web development course through Zero to Mastery (ZTM) and a Python Analysis course via Codecademy. My skills also include working with databases (both relational and non-relational) and building scalable, efficient solutions. Additionally, I've developed a cryptobot project, which showcases my ability to work with financial data, implement strategies, and integrate various technologies effectively. I am eager to contribute to innovative projects and expand my expertise in software development and data-driven solutions.

## Years of Experience: 1-2

Python   SQL   JavaScript   CSS

Web Developer   HTML

Backend Developer   Data Analyst

IT

## Languages

English Advanced   Slovak Native

Owner @Daze Trading

I had the pleasure of mentoring Tomas over the course of six months as we collaborated on developing a cryptocurrency trading bot. I initially met Tomas while showcasing a beta version of the bot to the Codecademy community. He reached out with enthusiasm for the project and expressed a strong desire to learn about the programming and systems involved in making such a complex tool work.

We decided to start from scratch and spent the following months building the bot together. Throughout the collaboration, I was continually impressed by Tomas's dedication and ability to quickly grasp advanced concepts. He had a solid foundation in programming, which allowed him to delve into more complex topics like design patterns (factories), GPU computing, and financial systems. He also took the initiative to independently research and incorporate elements of statistical inference into our trading algorithms, demonstrating his ability to blend theory with practical application.

Tomas truly excelled when taking ownership of certain aspects of the project. He led the design and implementation of the front-end interface and managed our extensive database of training data, which totaled an impressive 50GB and consisted of millions of rows of statistical information. His ability to organize, process, and utilize this data effectively was critical to the success of our project.

Tomas's enthusiasm for learning, combined with his technical skills and leadership abilities, made him an invaluable partner in this collaboration. I am confident that he will continue to excel in any role that requires initiative, technical expertise, and problem-solving skills.

tester @

I worked with Tomas for two months during his holiday in 2024. The main purpose was to show how our team works. Our team generally works on a webshop for a multinational company in the automotive sector (under the ZF group). Tomas has helped with smaller tasks and learned new things eagerly.

Studying graphic design @

I have known Tomas as both a classmate and a friend for some time now. While we haven't had the chance to collaborate on any specific projects, I can confidently speak to his passion and dedication towards his work in software development.

From our interactions in class, it's clear that he has a deep understanding of full-stack web development and Python programming. His enthusiasm for building scalable and efficient solutions is evident in the way he talks about projects, particularly his cryptobot project, which showcases his ability to work with financial data and implement complex strategies.

Although we haven't worked together professionally yet, I have no doubt that his skills in frontend and backend development, as well as his knowledge of databases, would make him a valuable asset to any team. His commitment to expanding his expertise and his willingness to contribute to innovative projects are qualities that stand out in his work ethic.

I can vouch for his professionalism and passion for the field, and I'm sure he would bring great value to any development project he is a part of.
